

# asset55 Operate is our multidiscipline, multi workflow, responsive collaboration software.

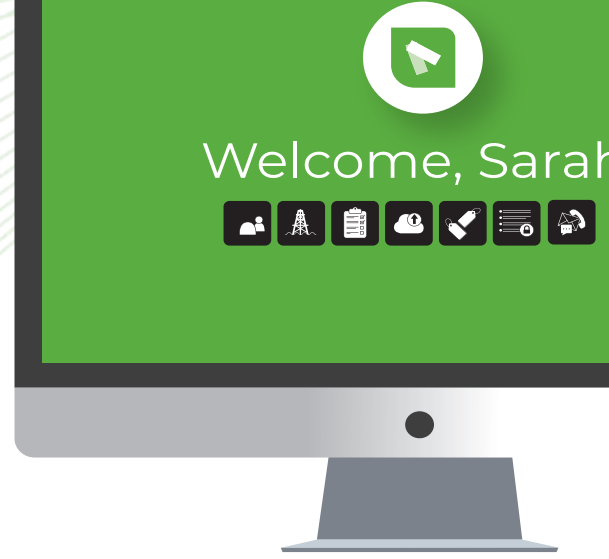

## Overview

Our flexible software platform is developed to support optimal planning, visibility and control within complex operational environments.

We are the proud digital partner of Score Group, offering our customers value driven turnkey services across multiple industry sectors and use cases.

Tailored services include, but not limited to:

- Emissions Management
- TAR and modifications
- Planned & preventative maintenance

## Emissions Elimination

Score and asset55 have developed an Emissions Elimination Program (EEP) that is fully digitised and integrated with the best of Operate's features. We are proud to offer best in class emissions visibility and repair solutions through our unique digital partnership.

Our turnkey service provides customers with onsite support to identify, control and eliminate emissions at source. We provide a seamless and efficient experience ensuring our customers reach their sustainability goals.

Together with our software and service, we secure regulatory compliance, eliminate greenhouse emissions and provide intuitive reporting dashboards to monitor asset performance and repairs throughout the asset life cycle.

Our innovative predictive analytics algorithms leverage failure mode data to highlight potential emission sources at asset component level. These insights enable our customers to predict and prevent emissions in a cost effective manner rather than identify and react with consequence.

## TAR & Maintenance

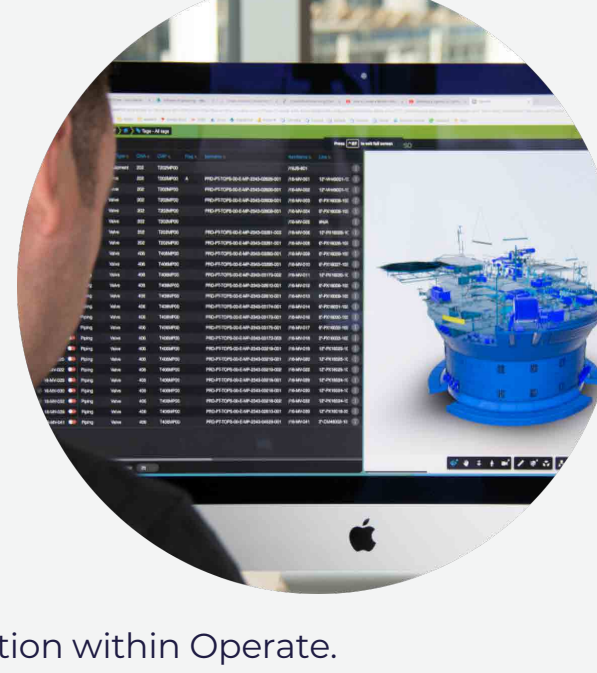

asset55 are industry leaders in the field of engineering data validation. At the heart of our software is our agnostic engineering database. We provide total flexibility in maintaining new and existing tags in a customised environment. Data driven planning is central to optimal execution of TAR & Maintenance activities. We leverage data and technology to automate labour intensive tasks.

Digital work preparation and planning opportunities with on site and/or remote resources is achieved with Operate. We guarantee increased organisational capacity and improved communication between all asset stakeholders. With increased predictability, our clients achieve significant reductions in cost and time for asset operations.

## Digital Planning

Draft, review and approve work packs plans with trusted data centrally within our software. Work pack types and their attribution are fully customisable. Our work pack philosophy is designed by industry professionals to maximise opportunities and efficiencies in the preparation and execution phase.

Our philosophy is to simplify the work preparation process to maximise customer value. Activities and plans can be created in minutes leveraging trusted source data from the engineering tag database and centrally stored documentation within Operate.

## Integrated Dashboard Analytics

Use operate to get real time, visual reporting on your data.

In a complex data environment, we enhance the communication of plans and critical priorities and increase collaboration across locations, disciplines and contractors.

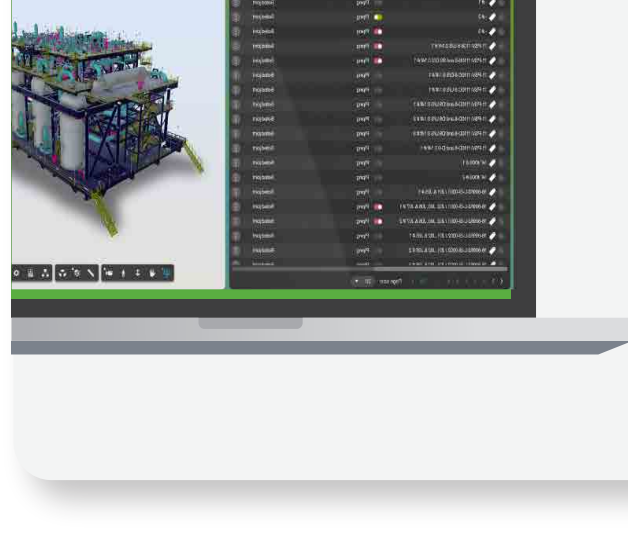

Emissions reporting is presented with supporting failure mode data to highlight current and forecast asset emission status.

## Contextualised and 3D model

Visualise your asset in Operate.

Viewers can view 3D models directly from the tag engineering database or work pack module. This 4D planning functionality enables all project stakeholders to visualise work scopes and critical path activities.

Scope status, emissions visibility, system isolations and activity status is visualised in real time centrally within Operate.

## Tools & equipment

Manage your tools in operate. Users can keep an inventory of tools and maintain their calibration records centrally. Operate will automatically create a non-conformance report for tools selected that do not have an up-to-date callibration.

## Personnel management

Operate allows you to manage the personnel within your organisation, including documented evidence for individuals' competency levels to perform the necessary tasks.

## Mobile Technology

With our innovative and highly interactive software, we enable utilising handheld devices in the field of work. Operate enables users to site walk and verify status of their 3D modeled scope in field.

Operate ensures work packs are updated, monitored and controlled safely, efficiently and within your data driven schedule.

## Support

### Knowledge campus

Operate is supported by a knowledge base featuring help articles, how-to videos, and information on how to get the most out of Operate.

### Helpdesk

Our 24/7, 365 days a year managed support desk is available to users of all asset55 software, with expert engineers and software developers on hand to resolve queries.

## About asset55

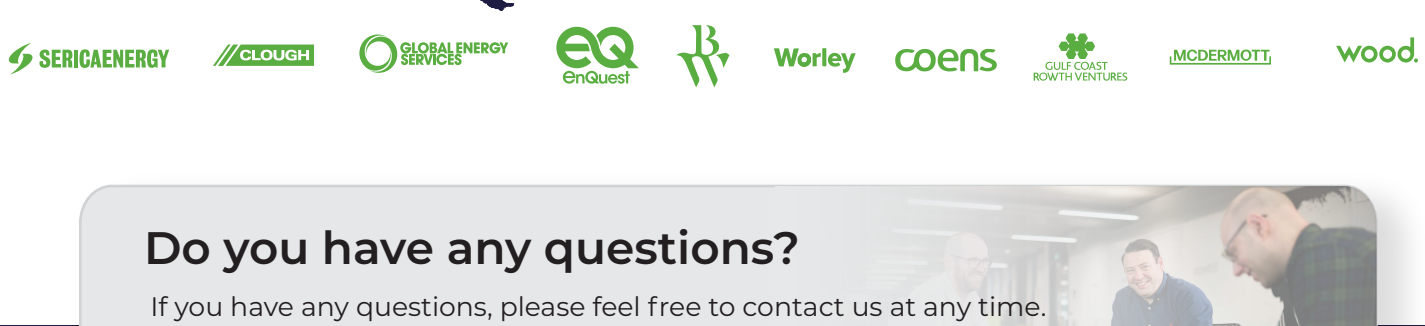

From small beginnings to industry leader

Established in 2012, asset55 has grown organically to become a leading and trusted provider of SaaS technology to the wider Energy market whilst maintaining clear objectives to support our customers on critical operations to ensure we go above and beyond expectations on delivery and execution of our services.

## Global Clients & Experience

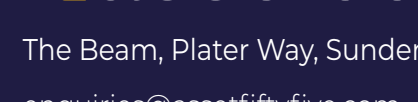

With over 20,000 users and 100's of client sides worldwide - we are trusted by over 50% of the world's largest producers.

## Do you have any questions?
